[Freedom from Necessity](#) Sep 29 2022 This book, first published in 1987, is about the classic free will problem, construed in terms of the implications of moral responsibility. The principal thesis is that the core issue is metaphysical: can scientific laws postulate objectively necessary connections between an action and its causal antecedents? The author concludes they cannot, and that, therefore, free will and determinism can be reconciled.

**Buildings for Industrial Storage and Distribution** Feb 29 2020 The bible of the industrial storage and distribution industry and the manual of policy and practice. It provides information for those with empty buildings on their hands, those trying to find space for new and/or growing enterprises and those faced with the problem of how to manage multi-tenant, multi-use buildings. An outline of feasibility studies both from the standpoint of users looking for a building and buildings looking for a use is also included. One is matched with

the other. The whole process is explained and placed in a legal and planning framework. Allowances for technological change and expansion are outlined as well as an explanation of the significance of various patterns of ownership, tenancy and management that can be adopted. As the container has been universally accepted for use in materials handling, this book is internationally relevant.
