**How to Build an Old Skool Bobber** Mar 01 2020 Kevin Baas begins the second edition of his How to Build an Old Skool Bobber book with a little

history, the history of bike building at home, as seen through the eyes of a young man watching his Vietnam-Vet father build a chopper at home in 1970. In his father's eyes, and Kevin's as well, the engine and frame should to be old skool - and genuine Harley-Davidson if possible - but the rest can and should come from swap meets, or the sweat of your own two hands. Kevin lays out the basics of bike building, starting first with the ideal components: which engine, which frame, and the differences in the various years. Next, things to watch out for when buying old parts, and how to fix the parts you do buy. Additional chapters describe brake systems, both early and late, tires and wheels, and frame geometry. Four complete start-to-finish bike assemblies round out this hands-on book.

**Creating Mr. Kortan** Mar 25 2022 More than a memoir of a custom cafe racer build this book is a tribute to a teacher who inspired young people to be creative with their minds and capable with their hands. Growing up in Fargo, North Dakota in the 1970s and 80s, The Urban Monk had the opportunity to develop a love for machines, metal working and motorcycles. This book provides a glimpse into what life was like for the author and his young friends in Fargo during that time. It is also a poignant defense of industrial arts education in public schools. After an over three year effort building a custom cafe racer in his spare time and documenting the entire process in videos shared with the world on his YouTube channel Urban Monk TV, the author tells the story of how this project became more than a custom motorcycle build - it became a tribute to his middle school Metal Shop teacher who inspired him to go on to a life time of peaceful meditation in his garage with a wrench in his hand. Anyone interested in motorcycles, mechanics, do-it-yourself projects or a historical retrospective of life in 70s-80s Fargo will enjoy this pleasant read.

**Industrial Competitiveness and Design Evolution** Jul 17 2021 This book integrates the concept of design into the existing framework of

industrial performance, international trade and comparative advantage in trade and industrial phenomena, which increasingly have been affected by design characteristics of tradable goods. Design, capability and their evolution are introduced into current theories of trade to explain the reality of international trade in the early twenty-first century and the possibility of design-based comparative advantage is explored. Toward that end, the concepts of design, architecture, organizational capability and productivity are introduced, as are their interactions and evolution. The author starts from the fact that firms' selection of design locations precedes that of production locations and that a new product's initial production location is usually the same as its design location. In other words, design matters in explaining today's trade phenomena. Thus, this book analyzes product design and its evolution in the context of the comparative advantage theory. The author argues that the concept of Ricardo's comparative advantage must be reinterpreted in a more dynamic way than in the past, with changing labor input coefficients treated as variables and driven by international capability-building competition between factories. Some of the many topics dealt with in this volume include a capability-architecture view of industrial comparative advantage, a design-based view of manufacturing, the evolution of manufacturing capabilities, Ricardian comparative advantage with changing labor input coefficients, comparative design cost and selection of design locations and a design process model behind comparative design cost. In this way, the behaviors of factories, product development projects, firms, industries and national economies in today's global competition are described and analyzed in the most realistic way.
